

## Confined Space

This course provides an understanding of the concept of a confined space and the various elements that may require a permit to be issued. The course focuses on assessing the hazards that may be present in a confined space and the proper means of the elimination. It delves into the proper implementation of a comprehensive confined space entry program with an emphasis on hazard identification and the elements of an effective confined space permit. Roles, responsibilities and training requirements of all CSE personnel will be thoroughly covered. The required amount of time to complete the course is dependent upon your knowledge of workplace safety. You have up to six months to complete the course.

### Our Confined Space Entry Specialist certification covers:

- Definition of Confined Space (three elements)
- Examples & Assessment Procedures
