

Chemical & Petrochemical Catalysts

The course will highlight major Catalyst players and a basic introduction to what Catalysts are and how this has grown to be big industry. There will be an overview of Commercial production of Catalysts and the economics of major catalyst categories. A brief look at some of the technical aspects of Industrial Catalysts will be covered, including how Catalysts get deactivated. The sourcing of strategic metals, their use and economic recycle and recovery, rounds out this snapshot look at a fascinating business.

You will learn:

Participants will learn to apply acquired knowledge of Catalysts for this Industry as well as understand the wide-ranging use and versatility of Catalysts. You will also gain familiarity with the major Catalyst types as well as have a full understanding of the rapid growth and importance of Catalysts. Knowledge of disposal and recovery of costly metals will also be gained.

This course for:

- Sales personnel with a chemical and petrochemical portfolio
- Market Analysts
- Business development
- Process engineers and industrial chemists
- Procurement managers with a Catalyst and Adsorbent portfolio

Course Duration:

2 Days
